

CP series Push-In Terminal Blocks have a specialized connection system that enables tool less wire connections. Reliable, vibration resistant, gas tight connections are made with in built high quality stainless steel Push-In spring clamps.

Solid wires and wires with crimped lugs / ferrules are simply pushed into the connection point. No special tools or screwdrivers are required for making such connections. The connection spring is actuated with minimum insertion force.

Standardized jumpers for shorting Terminal Blocks are now available in various pole configurations.

The possibility of using 2 independent rows for bridging enables the creation of various circuit combinations. Jumpers can be marked with a felt tip pen on the recess provided on top, to clearly indicate shorted positions.

Individual Terminal Blocks in an assembly can be skipped from getting shorted with the adjacent terminal. This is achieved by breaking intermediate contacts from the standard shorting link.

Step down jumpers facilitate shorting of different wire size terminals. This helps in building distribution circuits easily.

High quality stainless steel Push-In springs, provide a gas tight connection. A vibration proof, anti-loosening wire connection is achieved with this pre-stressed Push-In spring clamp system.

The jumper and marking tag position is aligned across different types of CP series Terminal Blocks. This facilitates shorting and marking adjacent terminals with different functionalities.

Ground Terminal Blocks have specially designed alloy feet which snap on to the DIN rail. They are green-yellow colour coded as per industry norms.

Multi connection Terminal Blocks are used for applications involving more than one same potential wires to be connected.

Double level Terminal Blocks enable high density wiring. Each level can be independently shorted to suit various applications.

Multi level Terminal Blocks are ideal choice for control systems. Two Level plus ground and three level plus ground terminals facilitate single & three phase connections.

Knife type disconnecting Terminal Blocks are available for applications in process control industries. The circuit on individual levels can be easily disconnected by lifting the disconnection lever.

Sensors and actuator Terminal Blocks are ideal for wiring machine control systems. These Terminals Blocks are extremely compact with a terminal thickness of as low as 3.5mm

8 Level Terminal Blocks are space saving method for potential and signal distribution. Push-In connection technology facilitates extremely high density wiring. This is an ideal choice for high density marshalling cabinets.

FEED THROUGH TERMINAL BLOCKS

CP series Push-In type Terminal Blocks are the next generation, compact terminals. These series of Terminal Blocks have 1000 V rating as per IEC guidelines. The new CP series terminals have a much wider range for wire terminations.

The wire is held directly against the copper current bar by pre stressed clamps.

The Push button on the top is to be pressed for using flexible cable without lug for connection. Lugged cable can be directly pressed into clamp to make connections.

Cross connection of these Terminal Blocks can be done using insulated Push-In jumpers available in various pole configurations.

CP1.5

Width (Thickness) x Length	3.5 x 45.3 mm		
Height with DIN 35 x 7.5 / 35 x 15 mm Rail	32.8 mm / 40.3 mm		
Connection Possibility as per	IEC	UL - CSA	
With 1 Conductor per clamp	Stranded / Flexible	0.2 - 1.5 mm ²	24 - 14 AWG
	Solid	0.2 - 2.5 mm ²	24 - 12 AWG
	with Ferrule / Lug	0.2 - 1.5 mm ²	24 - 16 AWG
With 2 same size Conductors per clamp	with TWIN Ferrule / Lug
